

ASV401 Headset Microphone

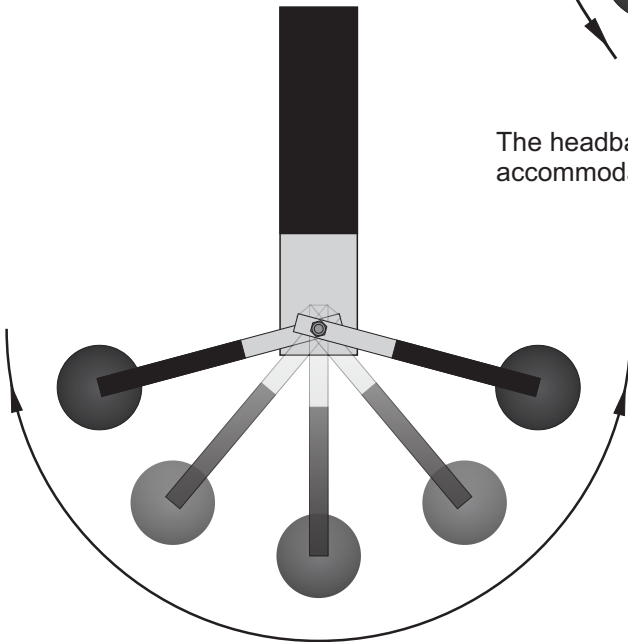

The ASV401 is a rugged, hand made aluminium microphone for use with tour coach PA systems.

The microphone is a condenser type and requires a bias voltage in order to operate. All Air Sound & Vision PA systems are capable of supplying this voltage, but very few other brands are. In order to use the ASV401 headset on one of these other PA systems, it is necessary to use an ASV1102 Condenser Mic adapter.

For proper operation, and to minimise feedback, it is important to have the microphone as close as possible to your mouth. The mic arm can be bent in or out to achieve this. Make sure to bend it in the curved area of the arm.

The headband can also be bent to accommodate different head sizes.

Mic arm rotates for left or right side placement
